SUBJECT: Report of Contruction at Shamshernagar Airfield.

TO : Commanding General
United States Forces, IBT
APO 885.

- 1. Transmitted herewith is a copy of Airdrome Order Form
 Supplement #2, Headquarters AAF-IBF, 2 April 1945, for Shamshernagar,
 and a copy of The Approximate Estimate of Cost for Shamshernagar, as
 of 30 October 1944 as prepared by the British. The cost estimate
 contained in paragraph 7 of AOFS #2 was prepared from the attached
 estimate of cost, in accordance with changes in facilities made at
 Shamshernagar since this cost estimate was prepared.
- 2. Reference is made to letter Headquarters IB-ASC, 25 May 1945, subject: "Construction at Shamshernagar Airfield", copy to your headquarters, which transmitted a report from the Assistant Air Engineer, Eastern Area, IB-ASC, regarding the expediting of construction at Shamshernagar.
- garde following is a brief report on the present status of facilities at Shamsharmagar outlined in the attached AOFS #2. The percentage of completion of the entire job is 85%. All percentages of completion listed below are as of 30 April 1945.
- a. Runways, taxiways, aprins and roads 98% complete. The outstanding work to be completed under this heading is the laterite surfacing of the road to the Advance Chemical Park, which it is estimated will be complete before the advent of the monsoon.
- b. Base Headquarters facilities 95% complete. The only works under this heading not yet completed are the hospital facilities which have not yet been started.
- c. ATC maintenance facilities 35% complete. All work in this area has been completed, with the exception of the erection of Butler Hangars and hangar lean-tos. All concrete buttresses and concrete floors for hangars in this area are complete, and steel for

one and one-half (1½) han ars has been erected. The erection of these han ars is being performed under the supervision of one(1) officer from this headquarters, and one (1) officer and four (4) enlisted men of the 879th Engineer Aviation Battalion. Sixteen (10) men from ATC and twenty (20) men from AS have been provided as a nucleus for the erection crews. Headquarters IB-ASC is making arrangements for the assignment of additional men for erection crews, and with this sugmentation it is estimated that the three (3) hangers for ATC, as well as one and one-half (1½) for ASC will be completed by 1 July 1945.

- d. ASC Headquarters facilities 88% complete. The only work remaining in this area is the completion of buildings already under construction.
- e. ASC maintenance facilities 65% complete. All facilities in this area, with the exception of the hangars, are complete. The concrete floor for the hangars is complete and pouring of the concrete buttresses is under way. The hangar erection crews referred to in paragraph 2c above, will complete the erection of the ASC hangars, which is expected by 1 July 1945.
- f. ASC warehouse facilities were reported 85% complete
 as of 30 April 1945. However, a tornado accurred 23 May 1945 which
 completely destroyed eleven (11) buildings and dammaged six (6) others,
 leaving only four (4) undamaged. Arrangements are being made for the
 repair of the six (6) damaged buildings, and the erection of one (1)
 futlar Hangar to replace the completely demalished buildings. there
 is a possibility that an additional Butler Hangar will be erected in
 this area, should it be decided that the present mission of ASC at
 Shamshernagar justifics its erection;
 - g. ASC Ordnance facilities and ASC MM facilities were reported 40% complete as of 30 April 1945, but suffered severe damage during the tornado of 23 May 1945, and will have to be practically rebuilt. It is estimated that this will take approximately six (6) weeks.
 - h. AEC and AEC domestic facilities 95% complete. These facilities are essentially complete, with the exception of a new housing area for ATC, consisting of approximately ten (10) buildings which is under construction. The busti type of construction used for these facilities is rather flimay, and suffers considerably under the heavy storms which occurs at Shamshermagar. The bamboo shingle roofs and the tarra mat wall panels blow off in the high wind, and constant maintenance in necessary to keep these buildings livable.

Any rain readily leaks through the roofs, and it is expected that eventually these roofs should be removed and replaced with thatching.

- i. Advance Chemical Park was reported 35% complete as of 30 April 1945. However, thirteen (13) covered bomb hardstandings blew down on 23 May 1945. It is doubtful that the target date of 1 July 1945 can be met, but it is not expected that completion will be delayed for more than two (2) weeks.
- j. Electrical facilities 20% complete. The power requirements listed in Section XI-a of AOFS #2, have been revised and the following power supply is being supplied by the British:

ATC Headquarters	- 30	KW,	AC
ATC Maintenance Area	- 150	KW,	AC
ASC Maintenance Area	- 90	KW,	AC
ATC Domestic Area	- 50	KN,	DC
ASC Domestic Area	- 50	KW.	DC
Link Trainers	- 50	KW,	AC

This headquarters is making the necessary arrangements to have the power requirements listed in AOFS #2 changed to conform with the power nequirements listed above.

up, minly because of non-availability of materials, all of which have been indented for by the Carrison Engineer, and are expected to be on tend shortly.

on the system is the installation of a 10,000 barrel storage tank, which is under construction.

general picture of the status of construction at Shamshernagar. If more specific information is desired, it is requested that this head-quarters be so notified.

FOR THE COMMANDING GENERAL:

E.A.BLUE. Captain, AGD. Asst. Adj. Gen.

2 Incls: Incl 1 - ACFS #2, Eq AAF-IBT, 2 Apr 45. Incl 2 - Approx. Est. of cost as of 30 Oct 44.
